# Oracle at Delphi

# Why did people like it

- All in one platform
- Great for GUI
- Quick

# Why do some people still like it

- Easy to maintain
- General purpose platform

# So why should you learn it?

(maybe)

- Maybe a time will come and you will need it
- Not beginner friendly
  - Programmer friendly
- Different than Java C/C++

# Readability & Writability

- In my opinion it is easier to read it than write it

```
var
   i: integer;
begin
   for i := 1 to 5 do
   begin
       ShowMessage('I is: '+IntToStr(i)) ;
   end;
End;
```
